Mathematics Education graduate (GPA 3.73/4.00) with strong analytical and problem-solving skills, transitioning into Data Analytics and Artificial Intelligence. Experienced in building end-to-end machine learning and AI applications using Python, SQL, FastAPI, Streamlit, Scikit-learn, and Gemini API. Developed projects in OCR, document classification, time series forecasting, sentiment analysis, and exploratory data analysis. Passionate about transforming data into actionable insights and building AI solutions to support business decision-making.

TECHNICAL SKILLS

Programming: Python, SQL

Data Analysis: Pandas, NumPy, Matplotlib, Scikit-learn

Machine Learning: Supervised & Unsupervised Learning, NLP, OCR, Time Series Forecasting

Frameworks: FastAPI, Streamlit

Database: SQLite

Tools: Git, Github, VS Code, DBeaver, Metabase, Power BI, Microsoft Office, Canva

PROJECT

AI KTP Classifier

Jul 2026

Tech Stack: Python, FastAPI, Streamlit, Gemini API, SQLite

- Developed an end-to-end AI application for Indonesian ID card classification and OCR using Gemini API.
- Built REST API services with FastAPI and developed an interactive user interface using Streamlit.
- Implemented business-rule validation to improve extracted data consistency and automatically identify invalid information.
- Stored OCR results in a SQLite database to support structured data management.

JISDOR Exchange Rate Forecasting

Jul 2026

Tech Stack: Python, Prophet, FastAPI, Pandas

- Developed a time series forecasting application to predict future USD/IDR exchange rates using Prophet.
- Performed data preprocessing and trend analysis on historical exchange rate data.
- Built REST API endpoints using FastAPI to serve forecasting results.
- Developed an interactive web interface for prediction visualization and CSV export.

Google Play Sentiment Analysis

Jul 2026

Tech Stack: Python, Scikit-learn, Pandas, TF-IDF, Sastrawi

- Collected and preprocessed Google Play Store reviews using web scraping techniques.
- Applied text preprocessing including case folding, tokenization, stopword removal, normalization, and stemming.
- Engineered features using TF-IDF and compared six machine learning algorithms including Logistic Regression, SVM, Random Forest, AdaBoost, Decision Tree, and Naive Bayes.
- Evaluated model performance to identify the most effective sentiment classification approach.

Airport Customer Segmentation (Clustering)

Jun 2026

Tech Stack: Python, Pandas, Scikit-learn

- Performed exploratory data analysis and feature engineering on airport passenger data.
- Applied K-Means clustering to segment customers based on behavioral characteristics.
- Evaluated cluster quality using the Elbow Method and Silhouette Score.
- Generated insights to support data-driven customer segmentation strategies.

TRAINING

Data Analyst and Data Science, BLKPP DIY

May – Jun 2026

- Completed intensive project-based training covering SQL, Python, data preprocessing, exploratory data analysis (EDA), machine learning, time series forecasting, and AI application development.
- Applied analytical and programming skills to develop end-to-end data solutions through real-world case studies and project implementation using FastAPI, Streamlit, Scikit-learn, and Git.

EXPERIENCE

Al-Azhar Yogyakarta World School, Yogyakarta

Oct 2025 – Jun 2026

Freelance Mathematics Tutor

- Delivered mathematics instruction for primary and secondary students using student-centered learning approaches aligned with curriculum objectives.

- Designed customized lesson plans, learning materials, and assessments to improve students' analytical thinking and problem-solving skills.
- Monitored learning progress, evaluated performance, and adapted teaching strategies based on individual student needs.
- Built strong communication and interpersonal skills through one-on-one and small-group instruction.

EDUCATION

Universitas Negeri Yogyakarta, Yogyakarta

Sept 2021 – Jul 2025

Bachelor of Mathematics Education (GPA 3.73/4.00)

Thesis: " The Effectiveness of Problem-Based Learning Using the Think Pair Share Model on the Learning Independence and Mathematical Problem-Solving Skills of Junior High School Students"

VOLUNTEER EXPERIENCE

Gerakan Mengajar Desa, Gunung Kidul

Jan 2024 – Feb 2024

Volunteer Teacher

- Delivered mathematics lessons for 6th-grade students.
- Supported Mathematics Olympiad training for 4th-grade students.

LANGUAGES

- Bahasa Indonesia (Native)
- English (TOEFL ITP 560)
